

Standard Highway Sign Designs for Texas

2006 EDITION

2007 Revision

Texas Department of Transportation

PREFACE

Detailed drawings of the Standard Highway Signs for Texas prescribed or provided for in the Texas Manual on Uniform Traffic Control Devices (TMUTCD), 2005, have been prepared by the Texas Department of Transportation, for use by all traffic authorities, agencies, jurisdictions and persons involved with the fabrication, installation and maintenance of traffic signs on streets and highways in the State of Texas.

These drawings are presented in English measure design units and are provided to promote uniformity in design. "Uniformity in design includes shape, color, dimensions, legends and reflectorization. This manual shows many typical signs approved for use on streets and highways. All symbols shall be unmistakably similar to those shown and where a word message is applicable, the wording shall be as herein provided unless alternative wording is optional. Most standard symbols are oriented facing left; however, this does not preclude further improvement by minor changes in the proportion of the symbols, width of borders, or layout of word messages, but all shapes and colors shall be as indicated."

An attempt has been made to provide uniformity of specific design details between two or more different types of signs having approximate sizes. Additionally, details for arrows and other items have been standardized as much as possible to facilitate fabrication of the signs and for uniformity.

For word messages, the spacing between individual character combinations can be adjusted visually to attain the most satisfying balance. Where spacing between individual letters has been reduced or increased the dimension is noted.

For symbol messages, the overall height and width of the symbol and its placement on the sign is shown. The exact detail of the symbol is shown on a grid. Any symbol may be enlarged to any size if done proportionally. The grid is provided as a reference to ensure the proportional relationship(s) remain correct.

The Standard Highway Signs book prescribes design details for up to five different sizes depending on the type of traffic facility including bikeways. Smaller sizes are designed to be used on bikeways and some other off-road applications. Larger sizes are designed for use on freeways, expressways, and can also be used to enhance road user safety and convenience on other facilities, especially on multilane divided highways and on undivided highways having five or more lanes of traffic an/or high speeds.

The intermediate sizes are designed to be used on two-lane, three-lane and four-lane highways that have low speeds and volumes.

The sign sizes are found in the appropriate sections the Texas Manual on Uniform Traffic Control Device: (<http://www.dot.state.tx.us>). The decision to use the most appropriate sign sizes is the responsibility of the street or transportation agency or engineer having authority over the traffic facility. Larger traffic signs are needed for two reasons. The driving population aging with reduced visual acuity requiring larger sign legends for the signs to be read. There has been an increase in traffic volumes and multi-lane roadways dictating larger and more effective signing for conspicuity and legibility.
